2/2-WAY SOLENOID VALVE WITH FLANGES, FORCE PILOT OPERATED

**Description:**
- 2/2-way valve in flanged design
- diaphragm design
- force pilot operated
- face-to-face length acc. to EN558-1, series 1
- duty cycle 100% (VDE0580)
- installation position: with upright solenoid
- flanges acc. to EN1092-1 PN16/40
- adjustable close muting from DN32
- types in grey cast iron and cast steel for corrosion protection with thick-film passivation
- connector plug acc. to EN 175301-803 or terminal box (depending on the coil design)

**Range of application:**
- viscosity 22mm²/s
- medium temperature -10°C up to +80°C
- ambient temperature: -10°C up to +35°C
- working pressure: 0 - 16 bar (up to 10bar)
- no pressure difference required
- IP65 (with a professionally installed connector socket) according to DIN 40050
- for hot and cold water, oil and air

**References:**
For contaminated fluids insertion of a strainer is recommended
At operating state temperature the input power of a coil decreases by up to ca. 30% due to physical reasons.

**Attention!** The conditions imposed on the Ex approvals lead to reduction of the permissible standard temperature ranges in the cases of explosion protected solenoids.

**Voltage tolerance +10% / -10%** with maximum pressure and standard ambient temperature. Please note when installing the flow direction (marked with arrow on body).

Valves with ANSI flanges available.

Other voltage, coil power or sealing on request! These can be found in the catalog under "spare parts and accessories". Included in delivery is the connector plug acc. to EN 175301-803. Further connector socket can be found in the catalog under square parts and accessories. Higher protection class than IP65 with special coils and connector sockets are possible on request.

**options:**
- NO: opened in rest position
- HA: manual override
- TH: high temperature design up to 130°C
- OF: free of oil and grease
- BU: free of non-ferrous metal
- PS: position indicator (from DN20)
- RS: explosion protection acc. to ATEX Ex II 2G EEx em II T4
- RS: adjustable close muting up to DN25 (from DN32 as standard)
- AA: sealed plunger spot

**Comments:**

An overview of the complete material code you can find at the beginning of each product section of the product catalogue.

**wear parts**:  
- diaphragm  
- spring  
- O-ring (RS)  
- O-ring for pilot hole  
- O-ring (RS)

*Wear parts can vary depending on the valve design.*

</table>

*solenoid power for AC:* listed are the pick-up power and the holding power.

**CV-value:** The nominal flow rate CV according to VDI / VDE 2173 is the water quantity in m³/h for the flow direction with the pressure difference ∆p = 1 bar and a medium temperature between +5°C and 30°C.

---

**Order information:**

1: type: FMV2700

2: connection size: 52-57 (see table)

3: materials:
- 1. digit: body material (L=grey cast iron, K=cast steel, O=stainless steel)
- 2. digit: sealing (B=NBR (standard), V=FKM, E=EPDM)

4: nominal size in 1/10mm (see table)

5: operation:
- 1. digit (3 digits): specification solenoid type (see table / options)
- 2. digit: specification voltage: 0: 230V AC
  - 1: 24V DC
  - 2: 110V AC (on request)

6: options (see "options")

Please ask for field specifications that are not listed in this data sheet.

Before installation please consider the installation and maintenance manual, especially the safety indications!
Heating and power of solenoid coils

default solenoid valves are designed for continuous operation (100% ED = power-on time) under normal operating conditions. The pulling force of a solenoid coil is basically influenced by three elements:

- the self-heating of the magnet coil
- the medium temperature
- the ambient temperature

Solenoid coils are by default designed for a maximum ambient temperature of +35 °C. This specification applies for the maximum allowable operating pressure specified in the data sheet of the corresponding valve, 100% duty cycle and a medium temperature of +80 °C.

A higher ambient temperature is possible, when lower values are applied for the other influencing parameters. When the max. operation pressure and max. ambient temperature of +50 °C is given the medium temperature is not allowed to be higher than max. +50 °C. In addition to that, deviations from the default design temperature range are possible, e.g. when temperature coils or other constructive measures are used. Please contact the MIT headquarters to discuss the specific application.

More precise specifications and technical data with regard to the operating conditions can be found in the data sheets of the solenoid coils and the solenoid valve regarded. Please observe that the surface temperature of a permanently loaded coil can amount up to +120 °C, solely by the self-heating of the coil. The power consumption of our default solenoid valves was calculated to DIN VDE 05820 for a coil temperature of +20 °C.
