

## 2/2-WAY SOLENOID VALVE, FORCE PILOT OPERATED IN DIAPHRAGM DESIGN

## Description:

- 2/2-way valve
- seat valve in diaphragm design
- force pilot operated
- female thread acc. to ISO228
- vacuum design
- duty cycle 100% (VDE0580)
- any installation position, upright solenoid position recommended

## Range of application:

- viscosity 21mm<sup>2</sup>/s
- medium temperature -10°C up to +90°C
- ambient temperature: -10°C up to +50°C
- working pressure 0 up to 16bar (AC) or 12 / 9bar (DC), no pressure difference needed
- also applicable in closed systems
- for hot and cold water, oil and air
- IP65 (with a professionally installed connector socket) according to DIN EN 60529

## References:

For contaminated fluids insertion of a strainer is recommended

At operating state temperature the input power of a coil decreases by up to ca. 30% due to physical reasons.

**Attention!** The conditions imposed on the Ex approvals lead to reduction of the permissible standard temperature ranges in the cases of explosion protected solenoids.

## Comments:

Please note the **flow direction** (marked with arrow on the body) during installation. **Voltage tolerance +10% / -15% for AC and +10% / -5% for DC** with maximum pressure and standard ambient temperature.

Other voltage, coil power or sealing on request! Included is the **connector socket GS02 (28x28mm)**. Further connector socket can be found in the catalog under square parts and accessories. **Higher protection class** than IP65 is possible with special coils and connector sockets.

**Threads according to EN 228:** It describes the threaded connection of a parallel male thread with a parallel female thread and is marked with "G".

pos	part	brass		optional material	
10.10	body	CW617N	A	stainless steel	O
10.40	bonnet	CW617N			
10.80	plunger and sealing	stainless steel and FKM		stainless steel and EPDM	
10.20	diaphragm	NBR	B	FKM*	V
				EPDM*	E

## wear parts: sealing system:

- Pos. 10.20: diaphragm

## wear parts solenoid system:

- Pos. 10.70: tube
- Pos. 10.80: plunger and sealing
- Pos. 20: solenoid

## options:

An overview of the complete material code you can find at the beginning of each product section of the product catalogue.

- OF: free of oil and grease
- CV: chemically nickel plated body
- NPT: pipe thread ANSI B 1.20.1
- stainless steel

## 2/2-WAY SOLENOID VALVE, FORCE PILOT OPERATED IN DIAPHRAGM DESIGN

match code	size [inch]	nominal size [mm]	working pressure [bar]			L [mm]	H1 [mm]	H2 [mm]	B [mm]	weight [kg]	CV** [m³/h]	solenoid power	
			min.	max. AC	max. DC							AC*	DC
GMV4187-02Ax150-M02-x	1/4	16	0	16	12	68,5	83,5	13	57	0,5	3	36VA / 18VA	14W
GMV4187-03Ax150-M02-x	3/8	16	0	16	12	68,5	83,5	13	57	0,5	3,6	36VA / 18VA	14W
GMV4187-04Ax150-M02-x	1/2	16	0	16	12	68,5	83,5	13	57	0,5	4,1	36VA / 18VA	14W
GMV4187-05Ax150-M02-x	3/4	20	0	16	9	81,5	90,5	20	57	0,8	6,1	36VA / 18VA	14W
GMV4187-06Ax150-M02-x	1	20	0	16	9	81,5	90,5	20	57	0,7	7,6	36VA / 18VA	14W

\*solenoid power for AC: listed are the pick-up power and the holding power.

\*\*CV value: The nominal flow rate CVs acc. to VDI/VDE 2173 shows the water quantity in cubic meter per hour with the valve fully opened,  $\Delta p=1$  and the water temperature between 5°C and 30°C.

## Order information:

1: type: GMV4187

2: connection size: 02-06 (see table)

## 3: materials:

- 1. digit: body material A (brass)  
body material O (stainless steel)
- 2. digit: sealing  
B=NBR (standard)  
E=EPDM  
V=FKM

4. nominal size in 1/10mm (see table)

## 5: operation:

- specification solenoid type: M02
- specification voltage:  
0: 230V AC  
1: 24V DC  
Other voltage on request

## 6: options: none

Please ask for field specifications that are not listed in this data sheet.

Before installation please consider the installation and maintenance manual, especially the safety indications!

## Heating and power of solenoid coils

default solenoid valves are designed for continuous operation (100% ED = power-on time) under normal operating conditions. The pulling force of a solenoid coil is basically influenced by three elements:

- the self-heating of the magnet coil
- the medium temperature
- the ambient temperature

Solenoid coils are by default designed for a maximum ambient temperature of +35 °C. This specification applies for the maximum allowable operating pressure specified in the data sheet of the corresponding valve, 100% duty cycle and a medium temperature of +90 °C.

A higher ambient temperature is possible, when lower values are applied for the other influencing parameters. When the max. operation pressure and max. ambient temperature of +50 °C is given the medium temperature is not allowed to be higher than max. +50 °C. In addition to that, deviations from the default design temperature range are possible, e.g. when temperature coils or other constructive measures are used. Please contact the MIT headquarters to discuss the specific application.

More precise specifications and technical data with regard to the operating conditions can be found in the data sheets of the solenoid coils and the solenoid valve regarded. Please observe that the surface temperature of a permanently loaded coil can amount up to +120 °C, solely by the self-heating of the coil. The power consumption of our default solenoid valves was calculated to DIN VDE 05820 for a coil temperature of +20 °C.
