2/2-WAY SOLENOID VALVE, PILOT-OPERATED IN PISTON DESIGN

GMV5100

Description:
- 2/2-way valve
- piston design
- pilot-operated
- female thread acc. to ISO228
- duty cycle 100% (VDE0580)
- any installation position, upright solenoid position recommended
- connector according to EN 175301-803

Range of application:
- viscosity 22mm²/s
- media temperature -10°C to +80°C
- ambient temperaturer -10°C to +35°C
- working pressure 1 (0,5) - 40bar (bis 25bar with ATEX-coil)
- The minimum pressure is necessary for pressure difference
- IP65 (with a professionally installed connector socket)
  according to DIN40050
- for hot and cold water, oil and air

References:
For contaminated fluids insertion of a strainer is recommended
At operating state temperature the input power of a coil decreases by up to ca. 30% due to physical reasons.

Attention! The conditions imposed on the Ex approvals lead to reduction of the permissible standard temperature ranges in the cases of explosion protected solenoids.

Comments:
Only minor solenoid force is required, because a pilot hole uses the pressure difference.
Smaller sizes are upgradable. Voltage tolerance +10% / -10% at maximum pressure and standard ambient temperature. Please note the flow direction (marked with arrow on the body) during installation

Types with other voltage, coil power or sealing on request! These can be found in the catalog under “spare parts and accessories”. Included is the connector socket GS02 (28x28mm). Further connector sockets can be found in the catalog under “square parts and accessories”. Higher protection class than IP65 with special coils and connector sockets is possible on request.

Threads according to EN 228: It describes the threaded connection of a parallel male thread with a parallel female thread and is marked with “G”.

Options:
- NO: opened in rest position, with coil G06
- HA: manual override
- TH: high temperature design up to +130°C
- high temperature design up to +200°C
- AA: sealed plunger
- OF: free of oil and grease
- BU: free of non-ferrous metal
- PS: positioning indicator (from 3/4”)
- EX: ExII 2G Ex m II T4
- ExII 2G Ex em II T4
- ExII 2G Ex emb II T4
- CV: chemically nickel plated body
- NPT: pipe thread ANSI B 1.20.1
- GM: basic quantity setting

Wear parts can vary depending on the version. Available are a service-set including a complete piston and a sealing set WITHOUT piston and seat seal.

*Other medium temperature for optional sealing:
- EPDM up to max. 120°C (a high temperature solenoid may be necessary)
- FKM up to max. 130°C (a high temperature solenoid may be necessary)
2/2-WAY SOLENOID VALVE, PILOT-OPERATED IN PISTON DESIGN

GMV5100

Bauart / Type:

Errors and changes excepted.

Revision:

* working pressure: information in parentheses = minimum working pressure for brass design (with small coil G02)

**CV-value: The nominal flow rate CVs acc. to VDI/VDE 2173 shows the water quantity in cubic meter per hour with the valve fully opened, ∆p=1 and the water temperature between 5°C and 30°C.

***solenoid power for AC: listed are the pick-up power and the holding power.

Order information:

1: type: GMV5100

2: connection size: 02-09 (see table)

3: materials:

- 1. digit: body material
  - A=brass
  - O=stainless steel
- 2. digit: sealing
  - B=NBR (standard)
  - E=EPDM
  - V=FKM

4. Stelle: nominal size in 1/10mm (see table)

5: operation:

- 1. digit (3 digits): specification solenoid type (see table / options)
- 2. digit: specification voltage:
  - 0: 230V AC
  - 1: 24V DC
  - 2: 110V AC (on request)
  - Other voltage on request.

6: options (see „options‟)

Please ask for field specifications that are not listed in this data sheet!

Before installation please consider the installation and maintenance manual, especially the safety indications!
Heating and power of solenoid coils

default solenoid valves are designed for continuous operation (100% ED = power-on time) under normal operating conditions. The pulling force of a solenoid coil is basically influenced by three elements:

- the self-heating of the magnet coil
- the medium temperature
- the ambient temperature

Solenoid coils are by default designed for a maximum ambient temperature of +35 °C. This specification applies for the maximum allowable operating pressure specified in the data sheet of the corresponding valve, 100% duty cycle and a medium temperature of +80 °C.

A higher ambient temperature is possible, when lower values are applied for the other influencing parameters. When the max. operation pressure and max. ambient temperature of +50 °C is given the medium temperature is not allowed to be higher than max. +50 °C. In addition to that, deviations from the default design temperature range are possible, e.g. when temperature coils or other constructive measures are used. Please contact the MIT headquarters to discuss the specific application.

More precise specifications and technical data with regard to the operating conditions can be found in the data sheets of the solenoid coils and the solenoid valve regarded. Please observe that the surface temperature of a permanently loaded coil can amount up to +120 °C, solely by the self-heating of the coil. The power consumption of our default solenoid valves was calculated to DIN VDE 05820 for a coil temperature of +20 °C.
